

Team 15: Minutes of Meeting

Date: 27 March 2024 – Client meet 8

What we have shown:

1. We showed the integration for the Profile page
2. The current implementation without password. We asked Ma'am about why we have no password integration yet, she said it is a development server.
3. We asked for the PDF files which are encrypted. She said she will include it in the main API too
4. Currently the APIs are independent, currently the dev server doesn't have session key and everything.
5. We showed her the new Leave Application requests page.

Future Tasks:

1. For now the bank details have dummy data, and now the client will send us API for that too after requesting.
2. Figure out how to send PDF, through a blob, and send it through the JSON.
3. Implement loading page when the app is still fetching the API
4. Implement the alerts

Feedback from client:

1. She liked the changes and said she will send the rest of the APIs also
2. She told us to continue working on the rest of the features such as attendance and transcript.
